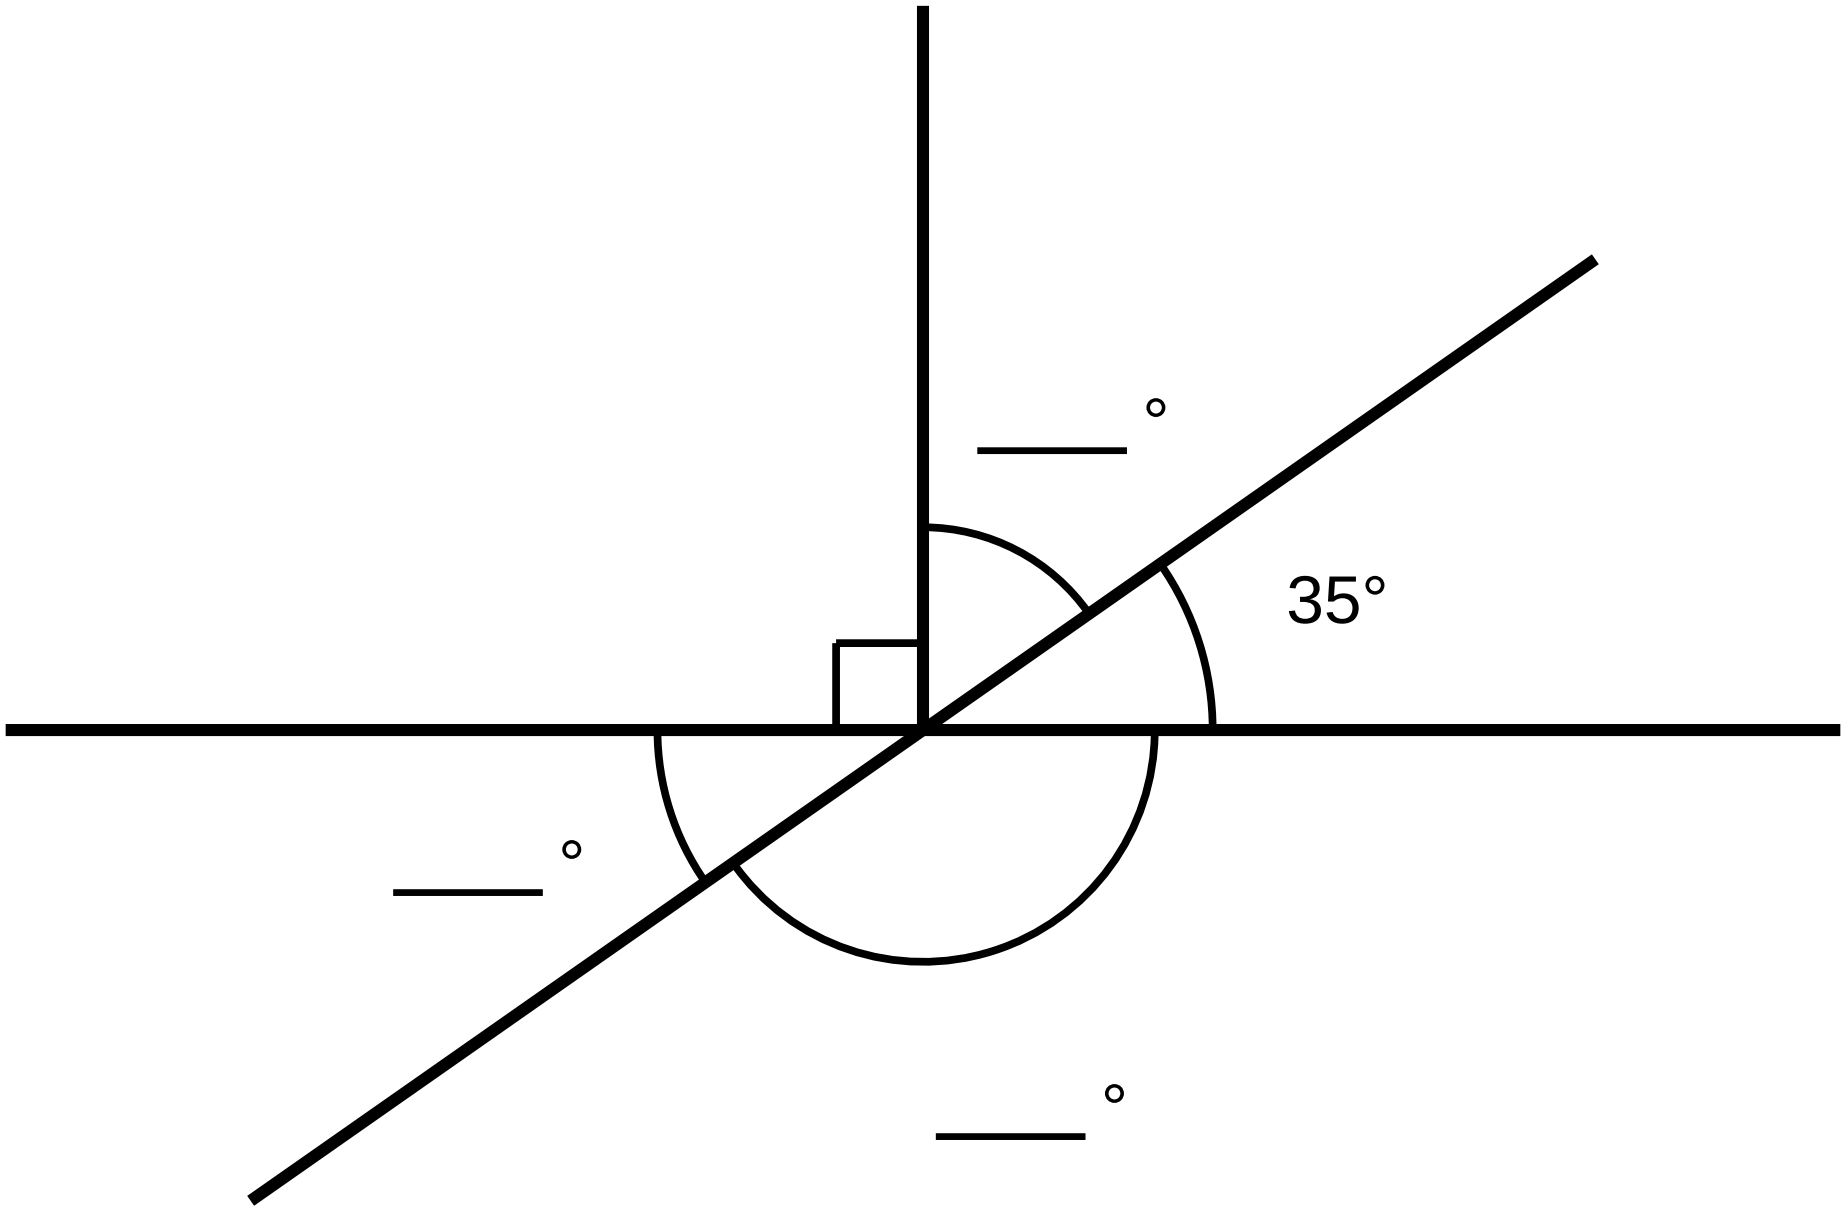
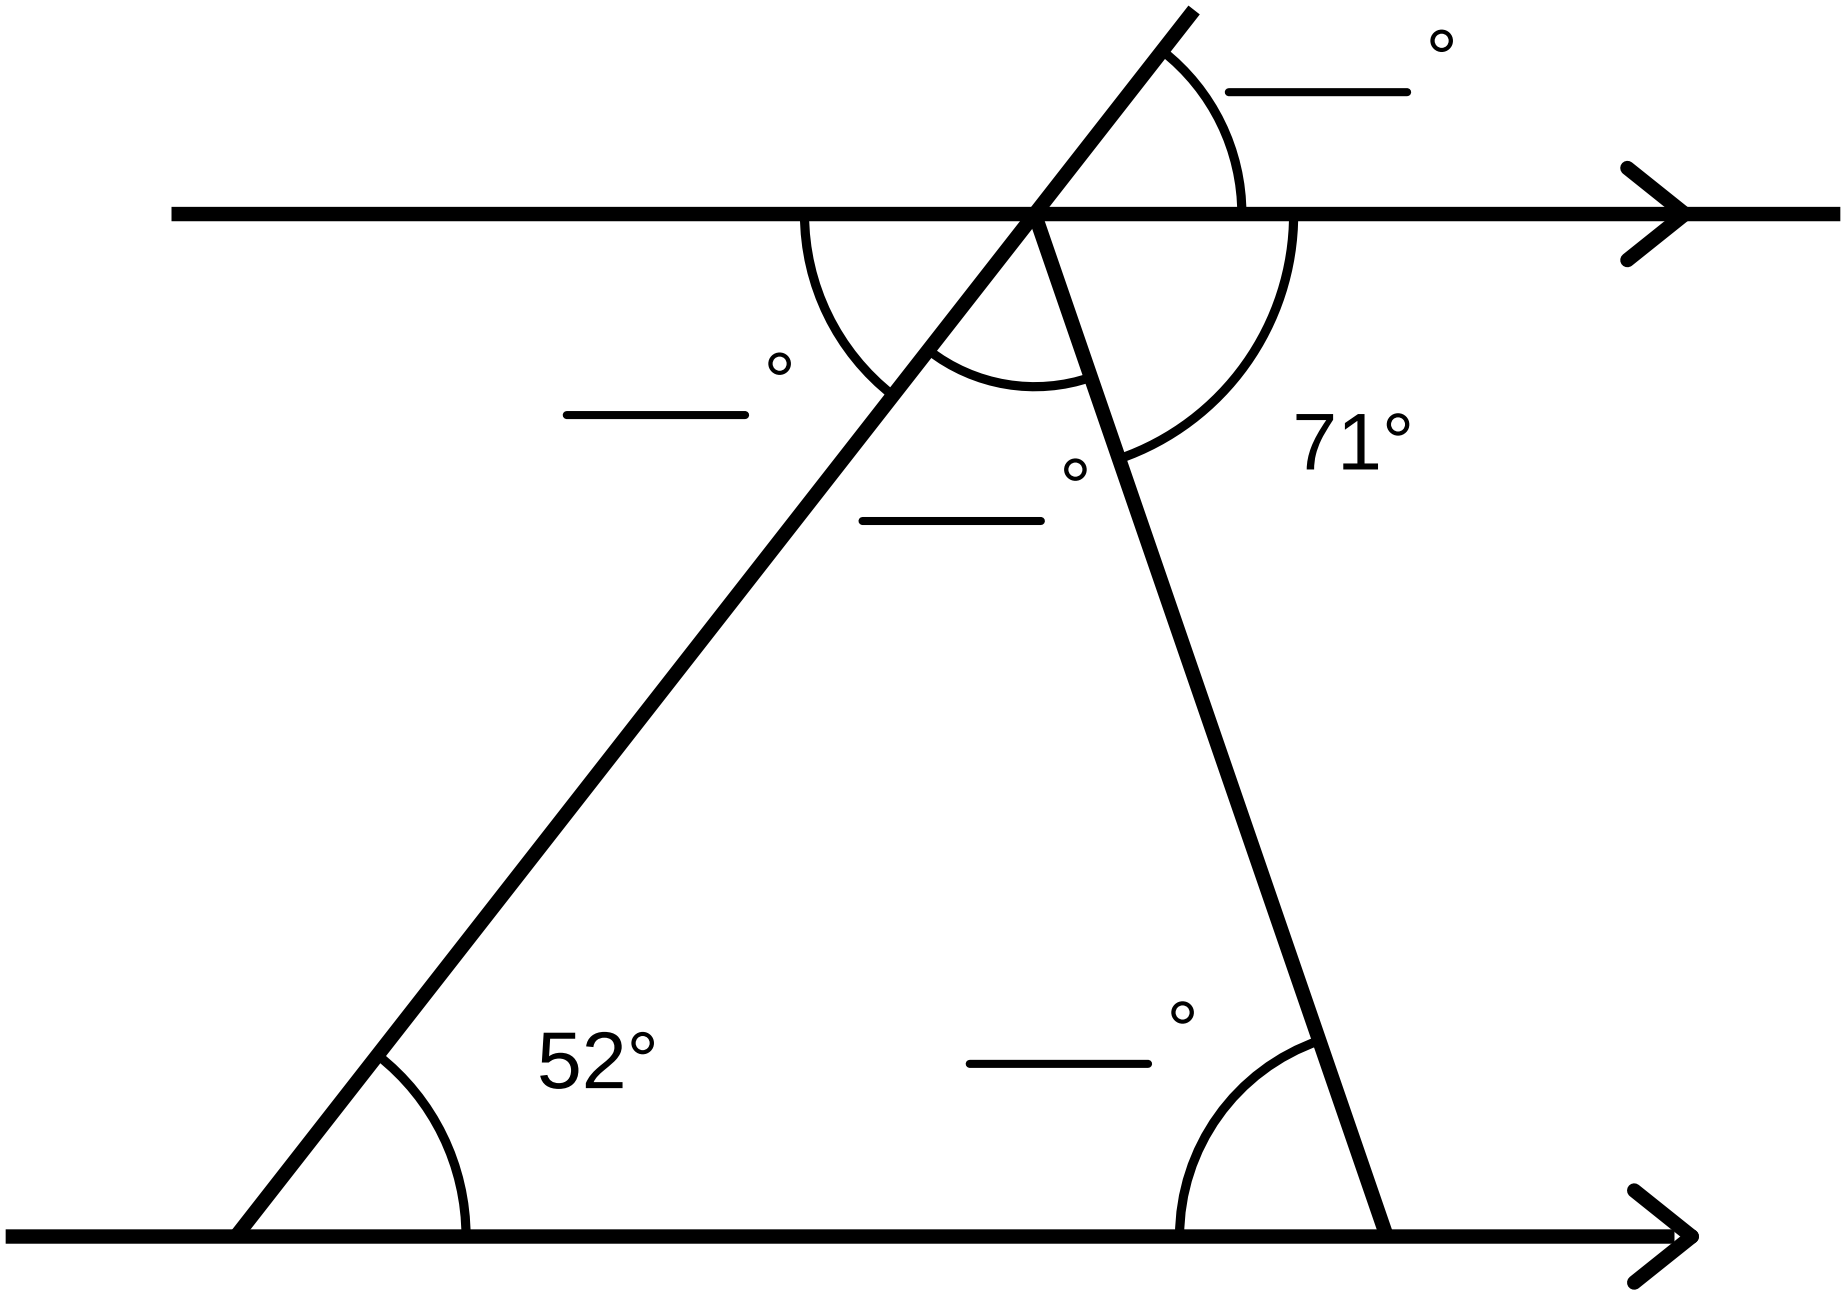
STATION 1

Fill in each missing angle measure.



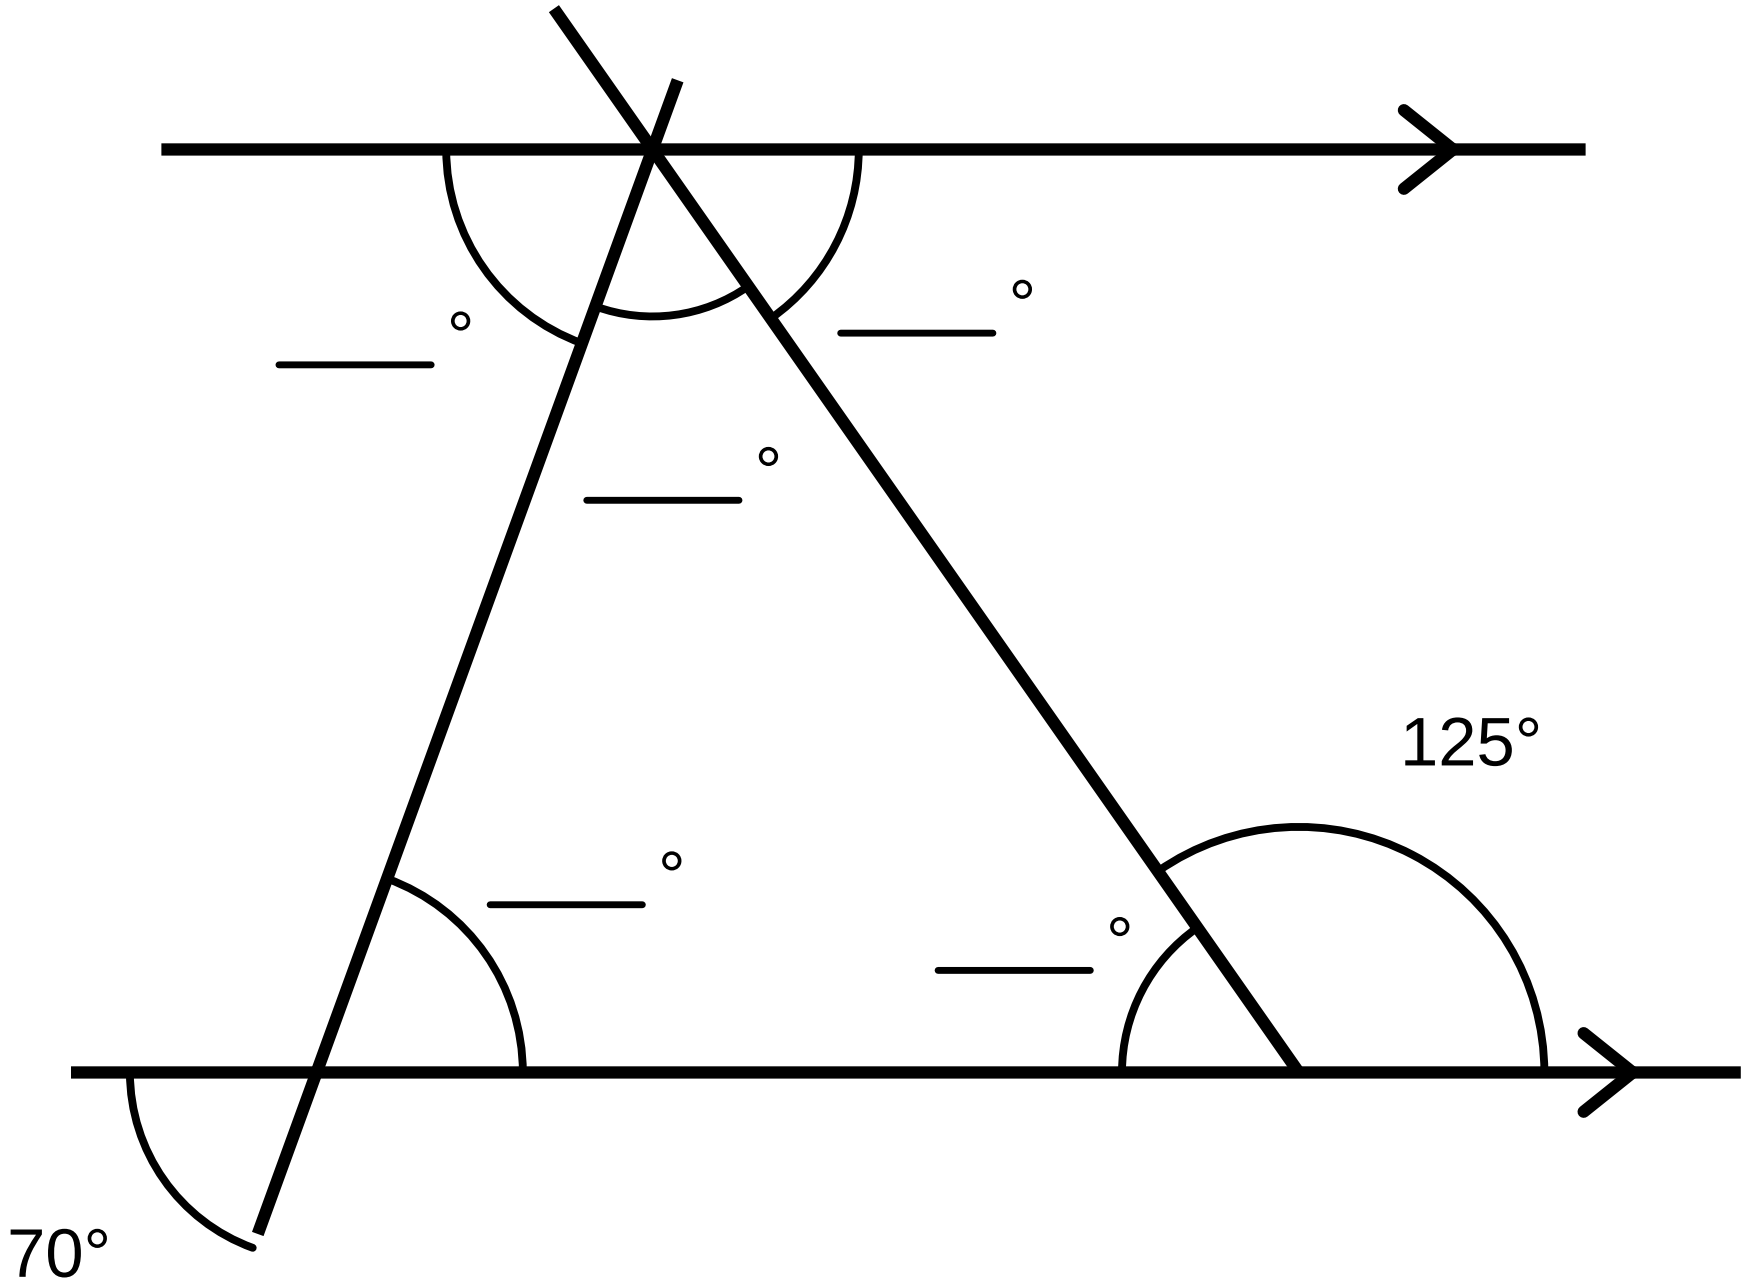
STATION 2

Fill in each missing angle measure.



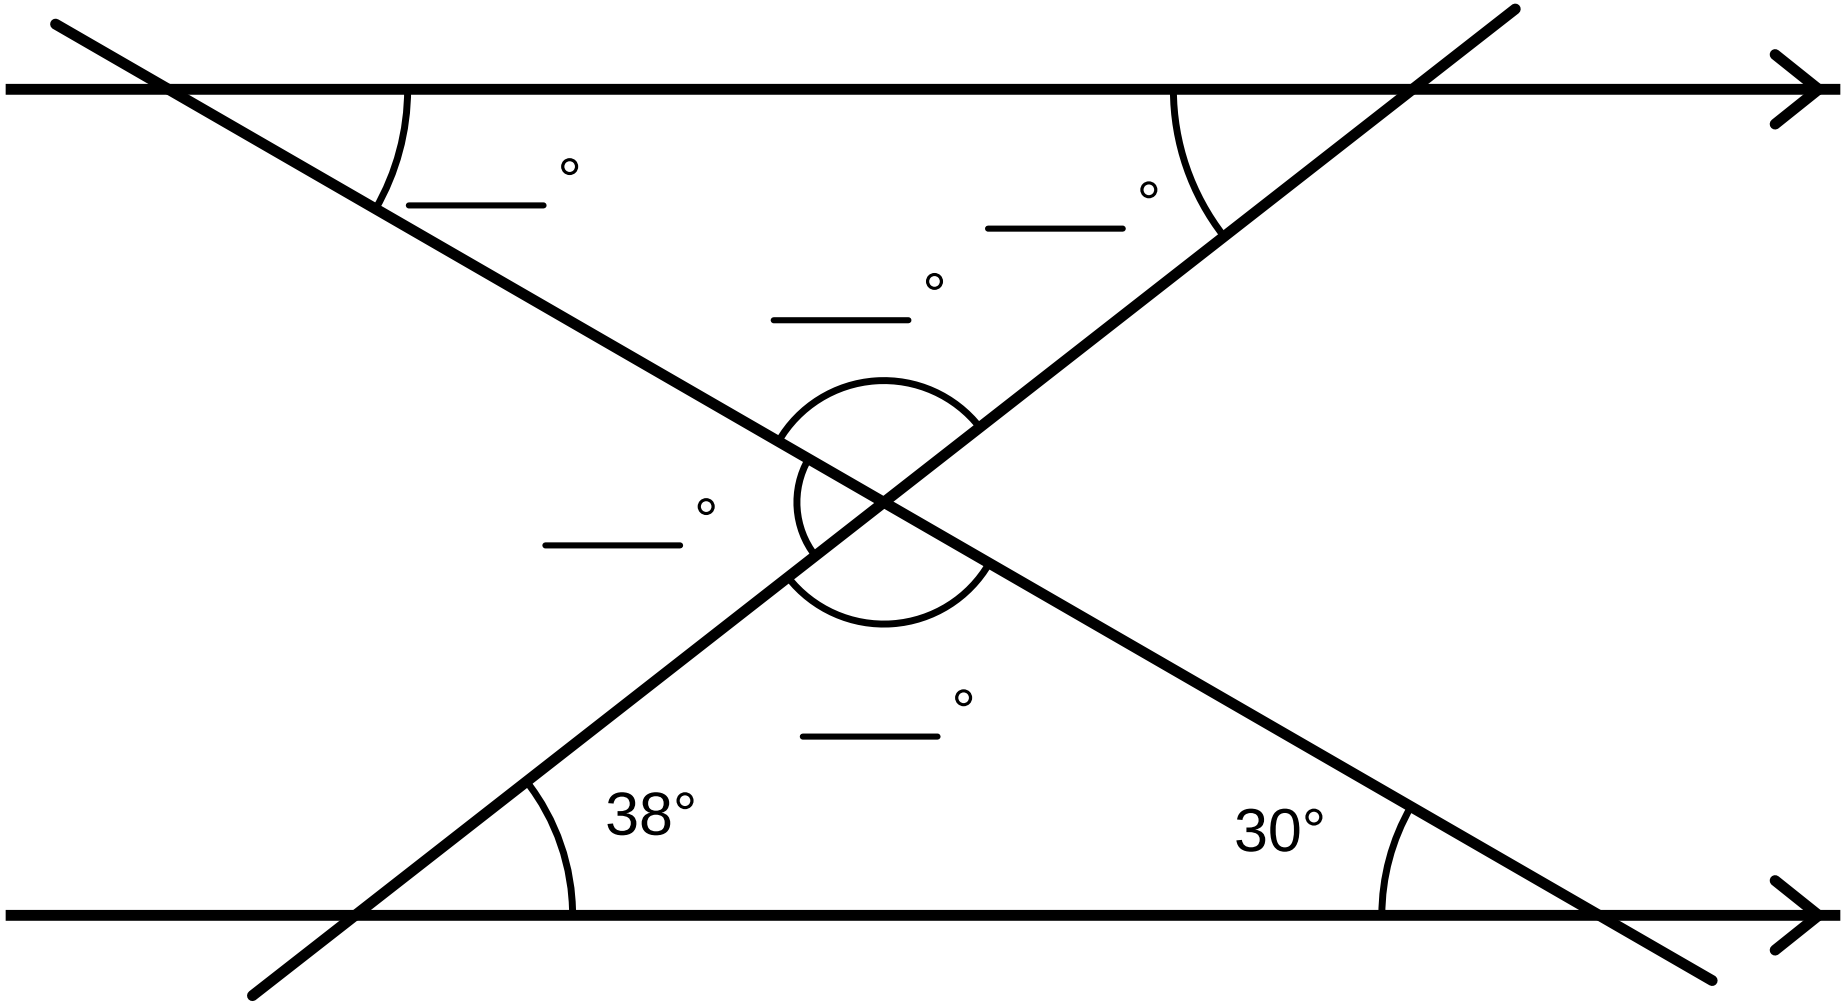
STATION 3

Fill in each missing angle measure.



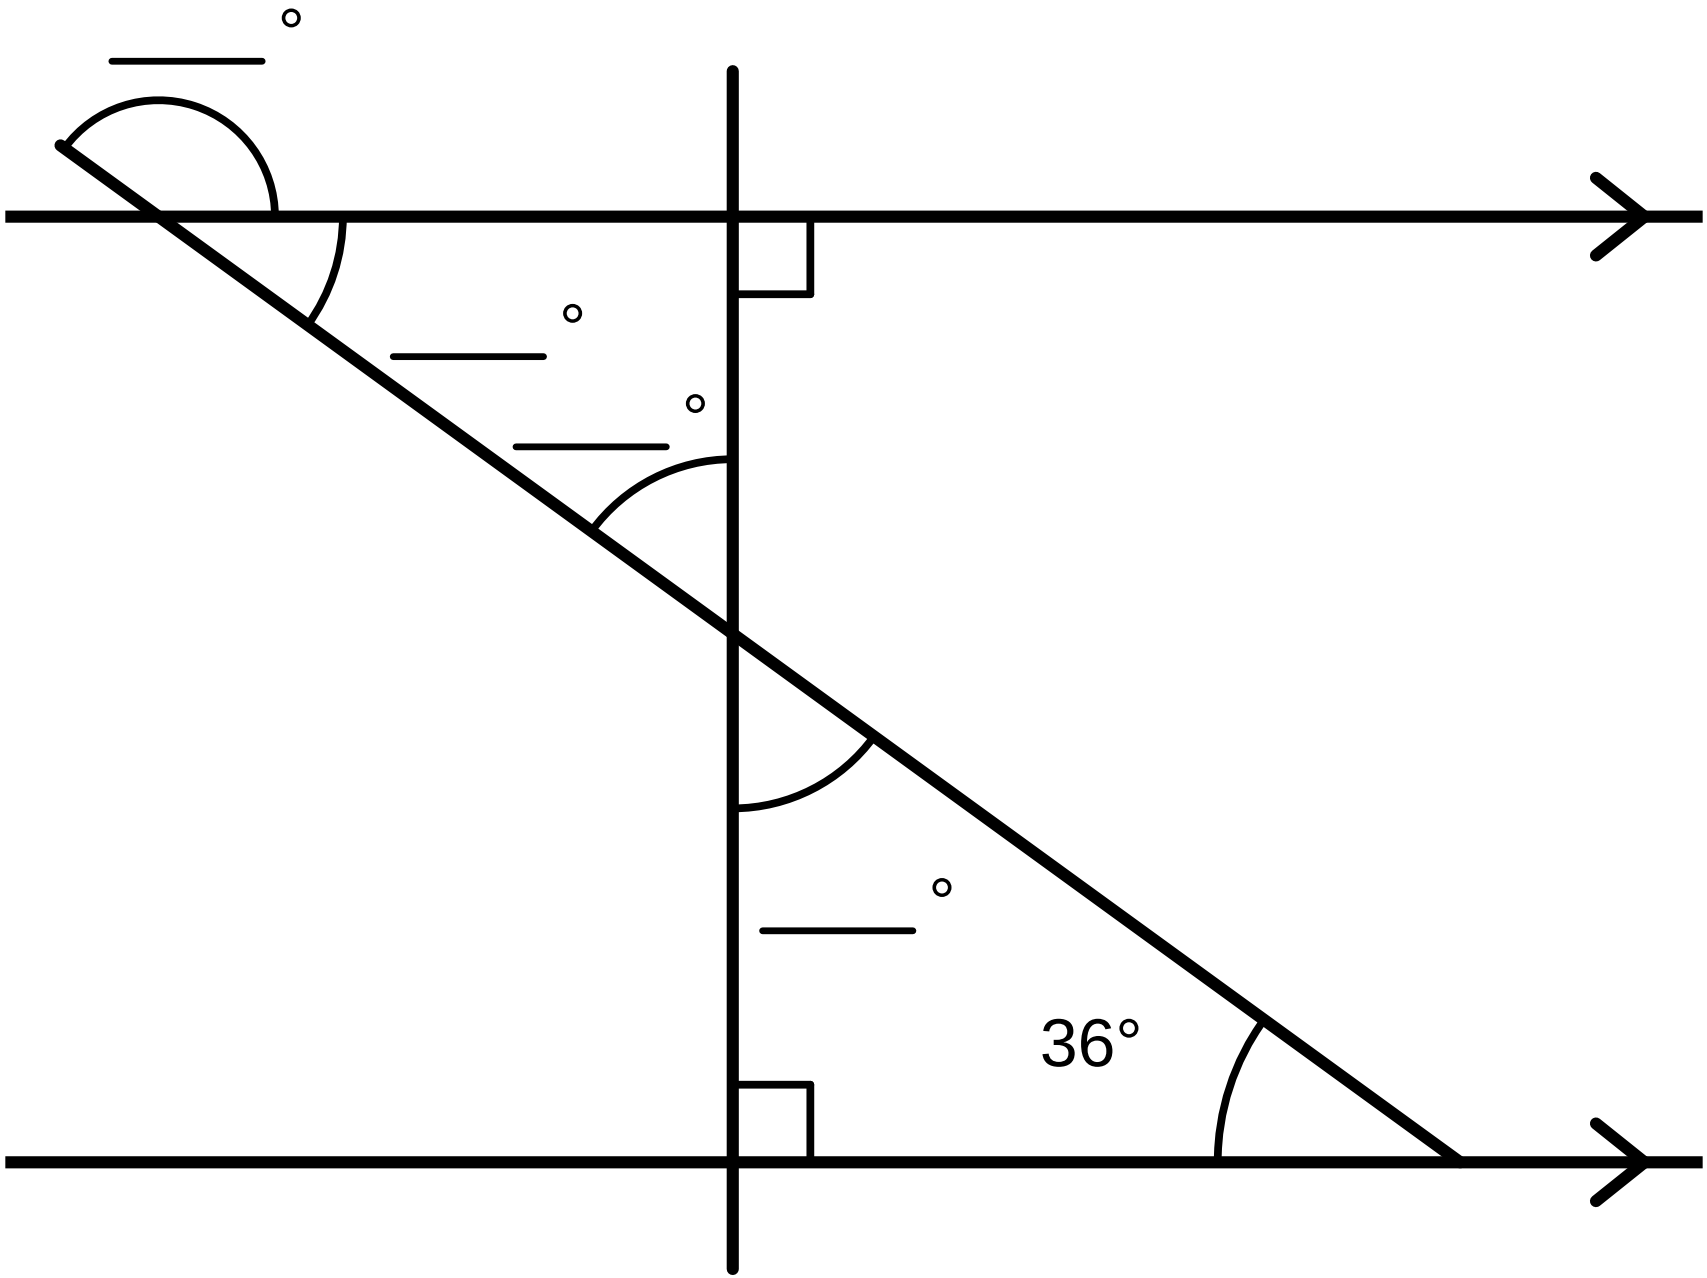
STATION 4

Fill in each missing angle measure.



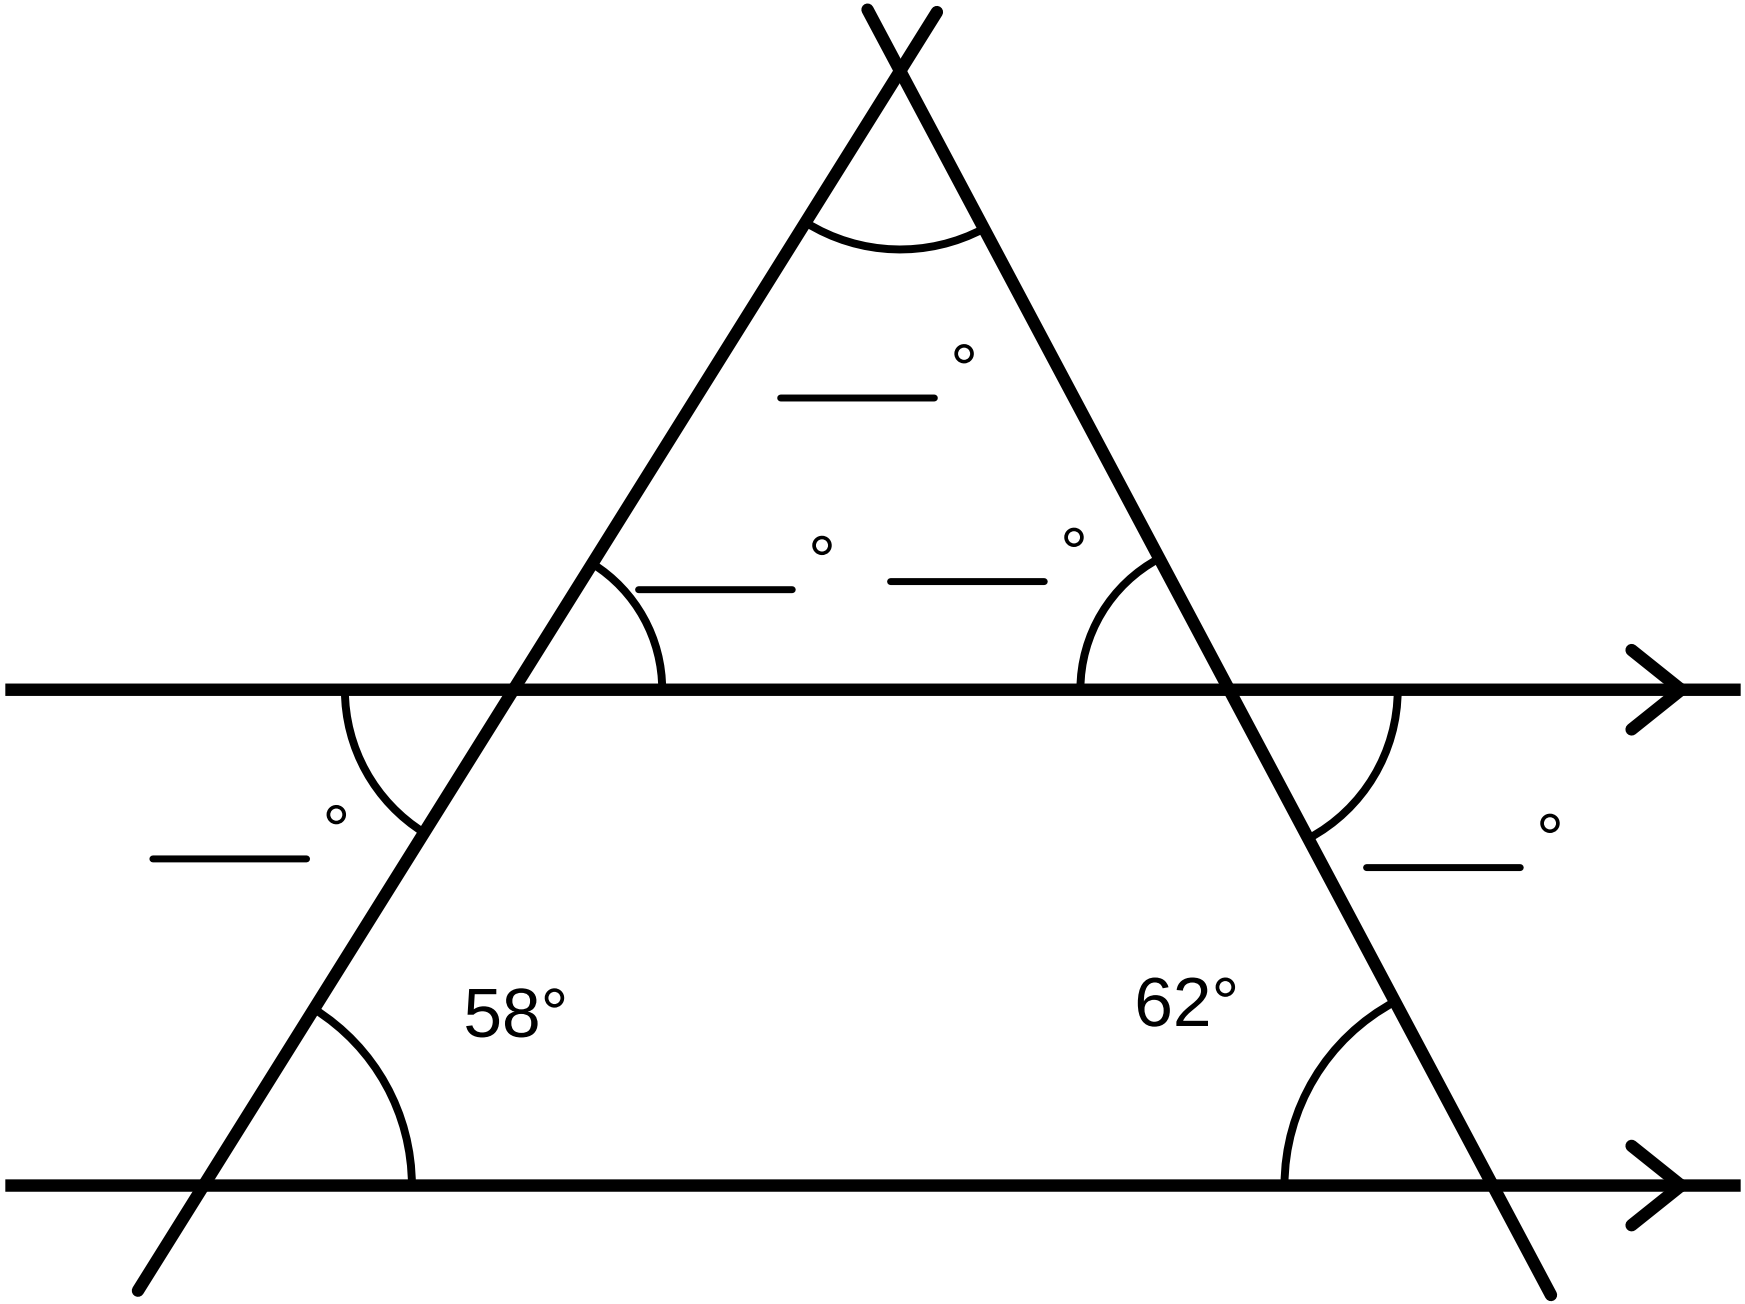
STATION 5

Fill in each missing angle measure.



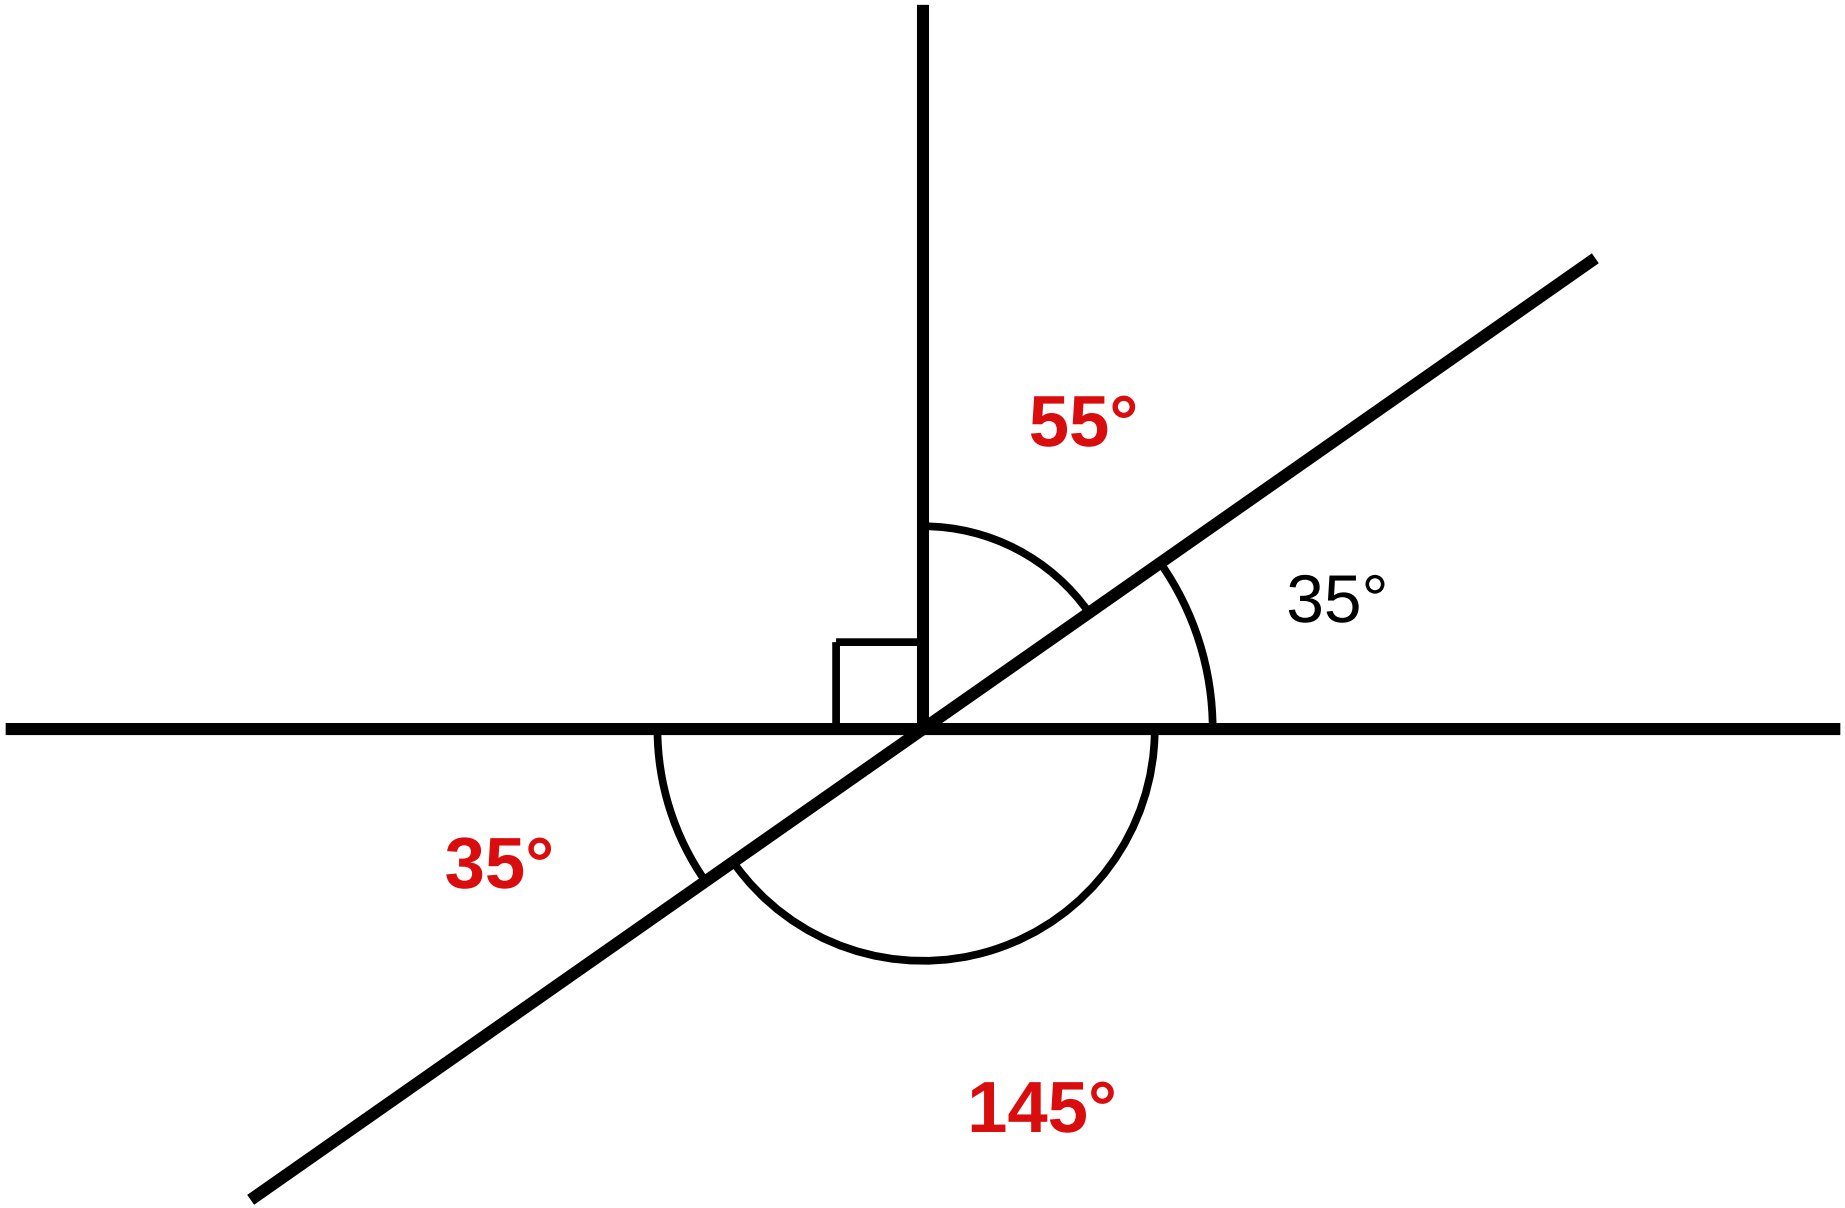
STATION 6

Fill in each missing angle measure.



STATION 1

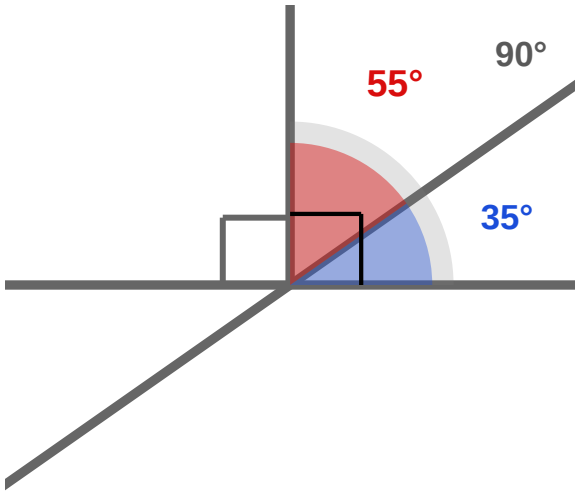
ANSWER KEY



STATION 1

HOW THE ANSWERS WERE FOUND

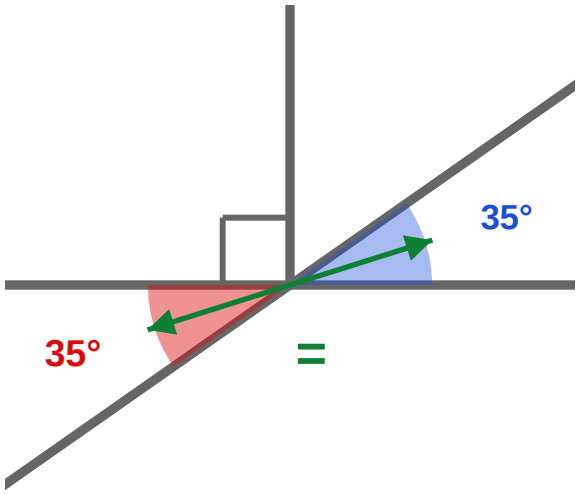
Step 1



Complementary angles add to 90°

angle = 90° - 35° = 55°

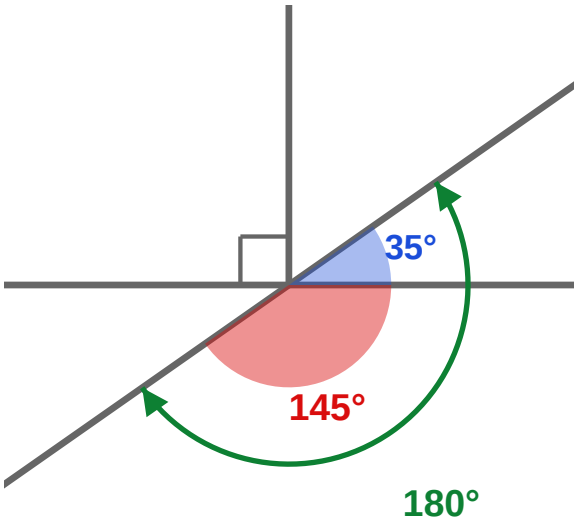
Step 2



Vertical angles are equal

angle = 35°

Step 3



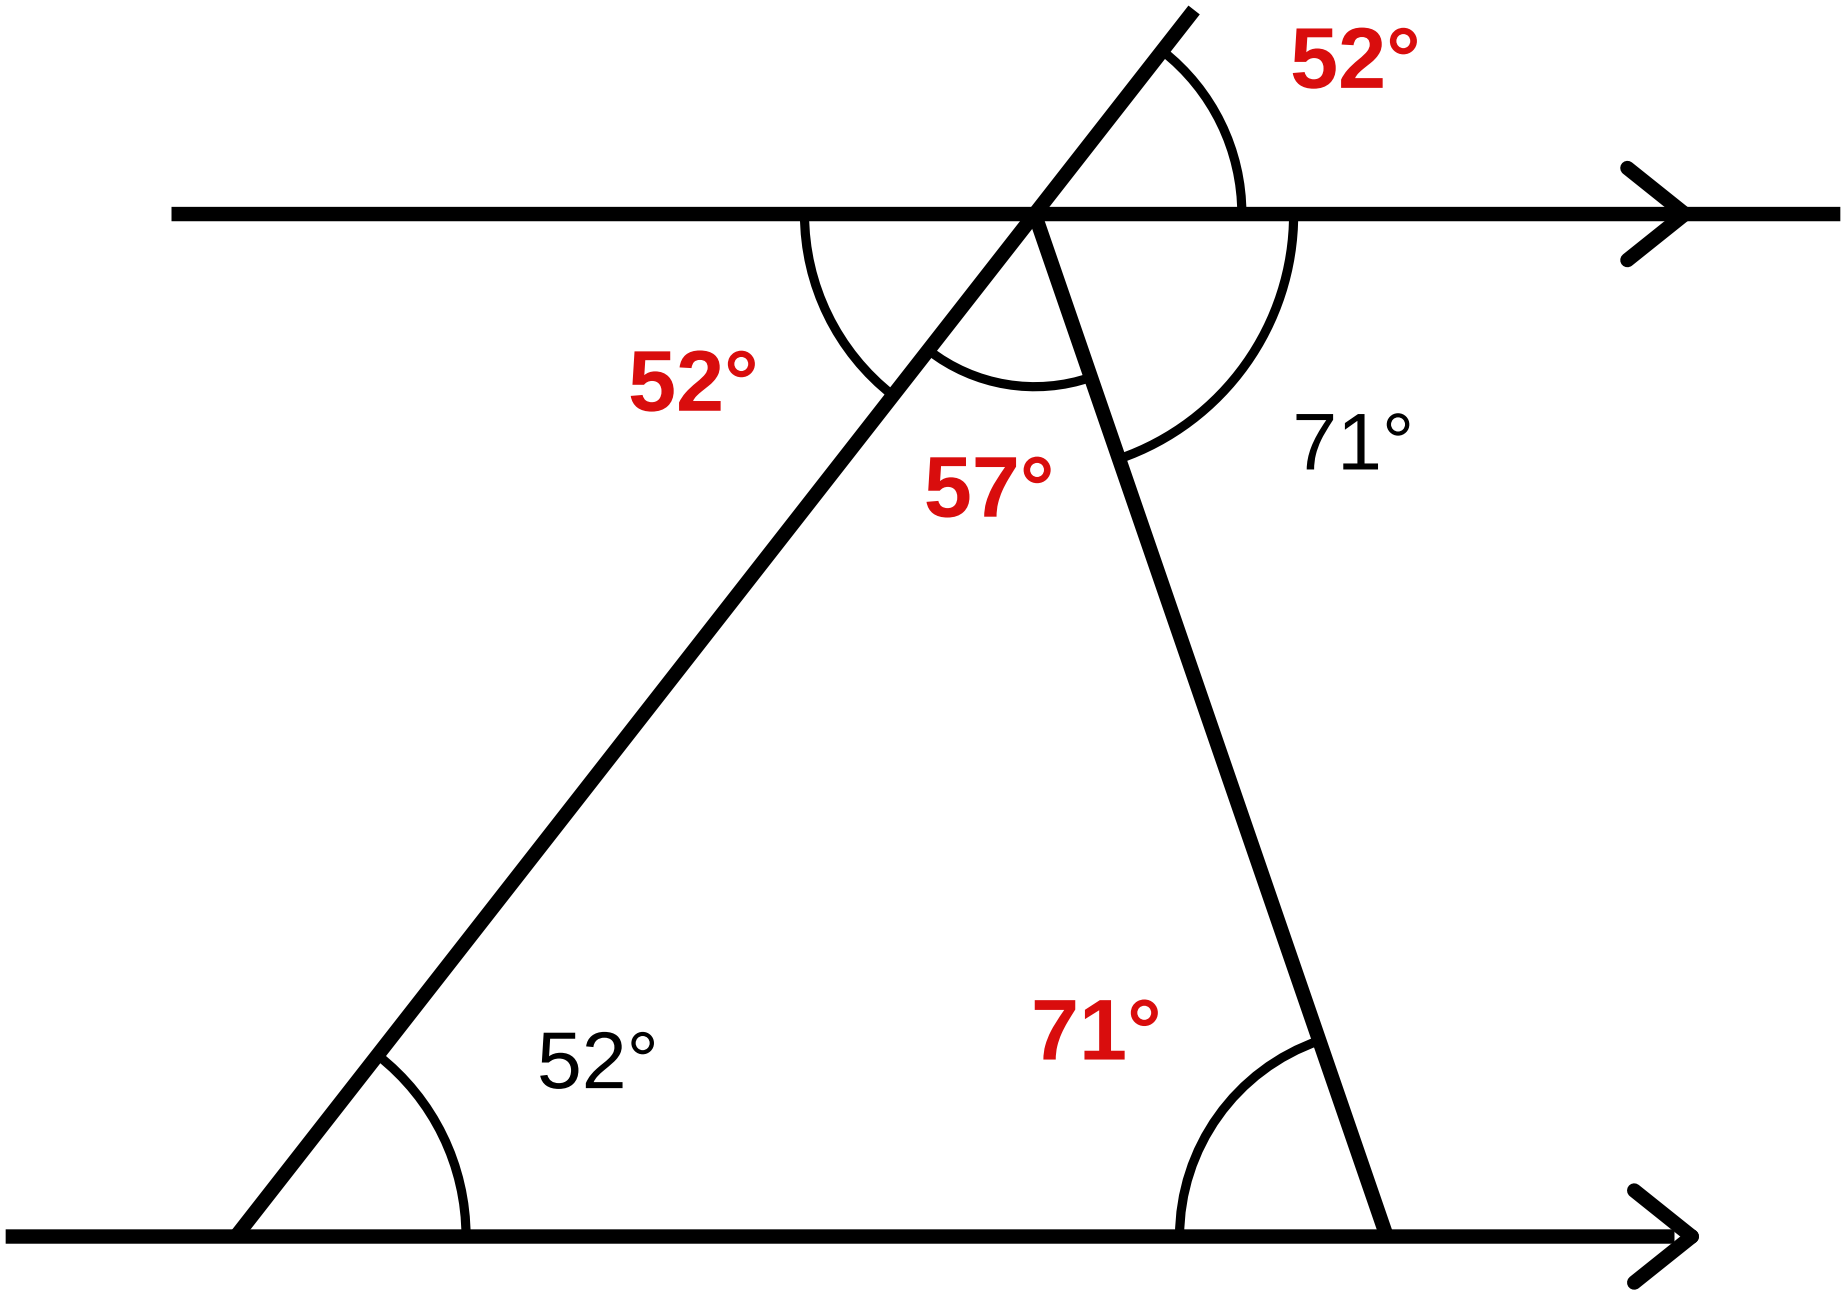
Supplementary angles add to 180°

angle = 180° - 35° = 145°

angle we already know | angle we are finding | triangle = 180° | arrows: equal angles / straight line = 180°

STATION 2

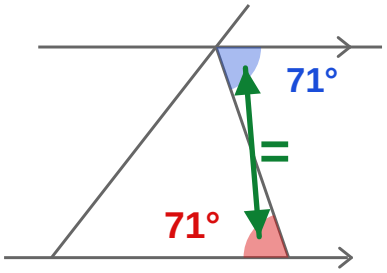
ANSWER KEY



STATION 2

HOW THE ANSWERS WERE FOUND

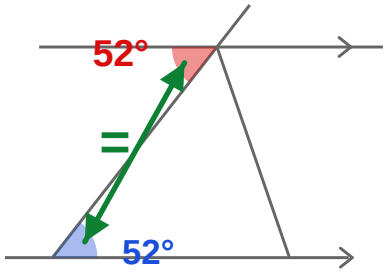
Step 1



Alternate interior angles are equal

angle = 71°

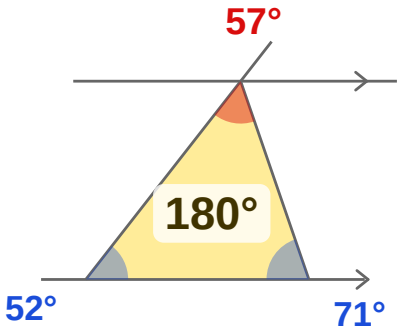
Step 2



Alternate interior angles are equal

angle = 52°

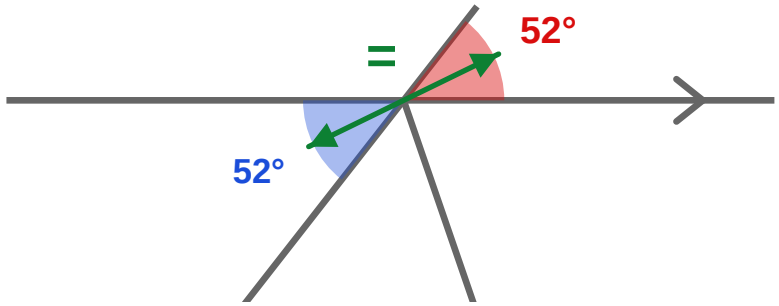
Step 3



The angles in a triangle add to 180°

angle = 180° - 52° - 71° = 57°

Step 4



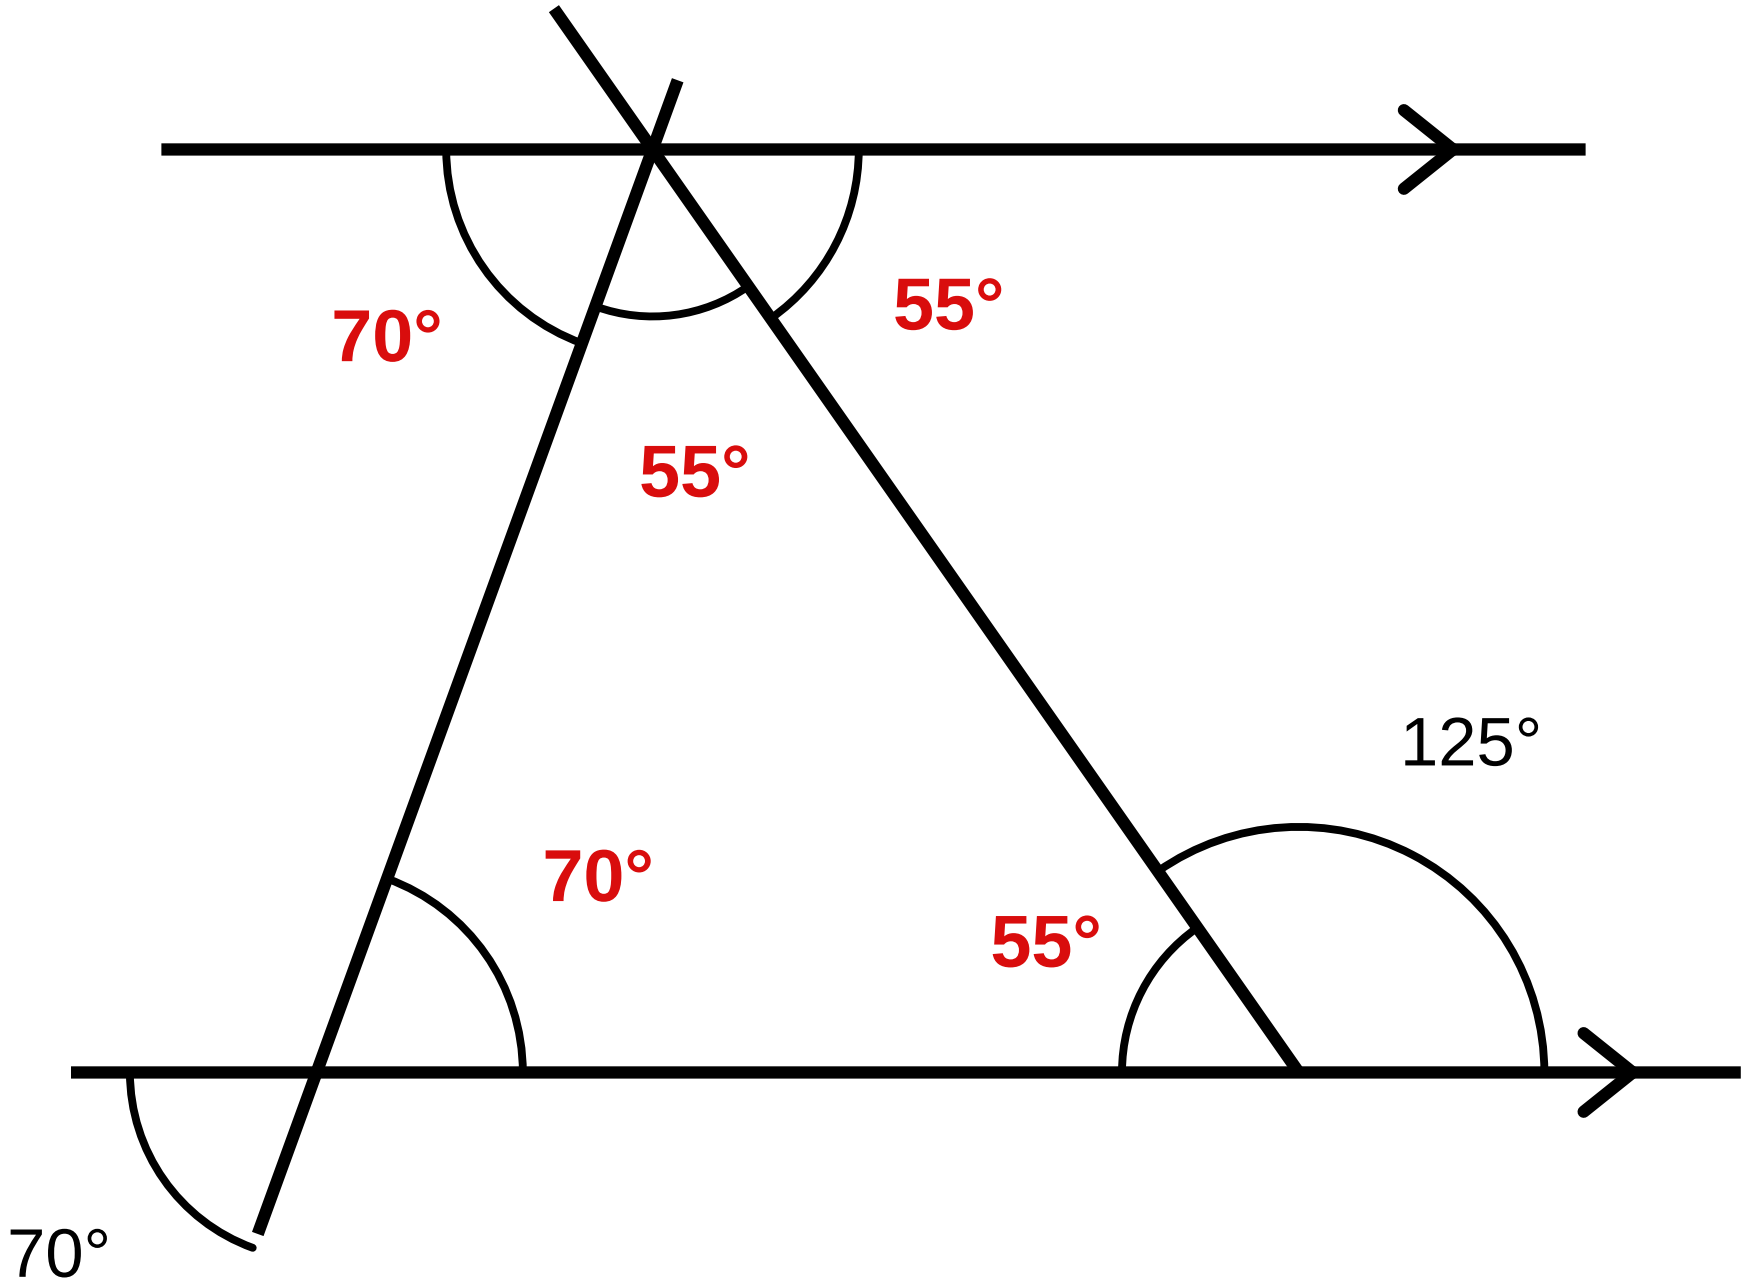
Vertical angles are equal

angle = 52°

angle we already know | angle we are finding | triangle = 180° | arrows: equal angles / straight line = 180°

STATION 3

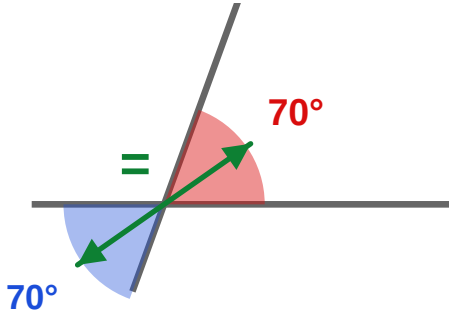
ANSWER KEY



STATION 3

HOW THE ANSWERS WERE FOUND

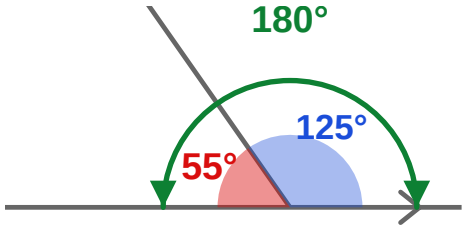
Step 1



Vertical angles are equal

angle = 70°

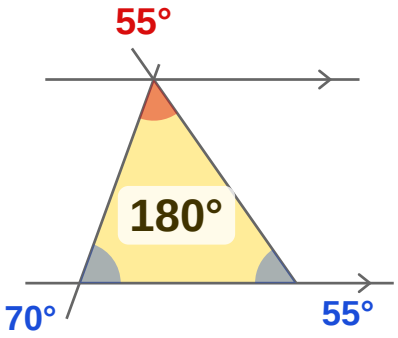
Step 2



Supplementary angles add to 180°

angle = 180° - 125° = 55°

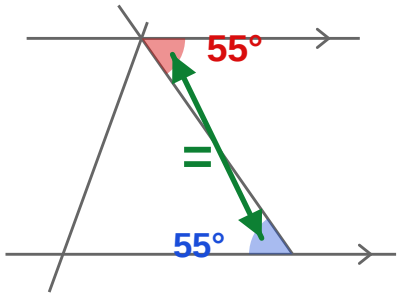
Step 3



The angles in a triangle add to 180°

angle = 180° - 70° - 55° = 55°

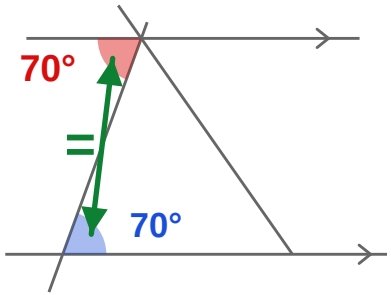
Step 4



Alternate interior angles are equal

angle = 55°

Step 5



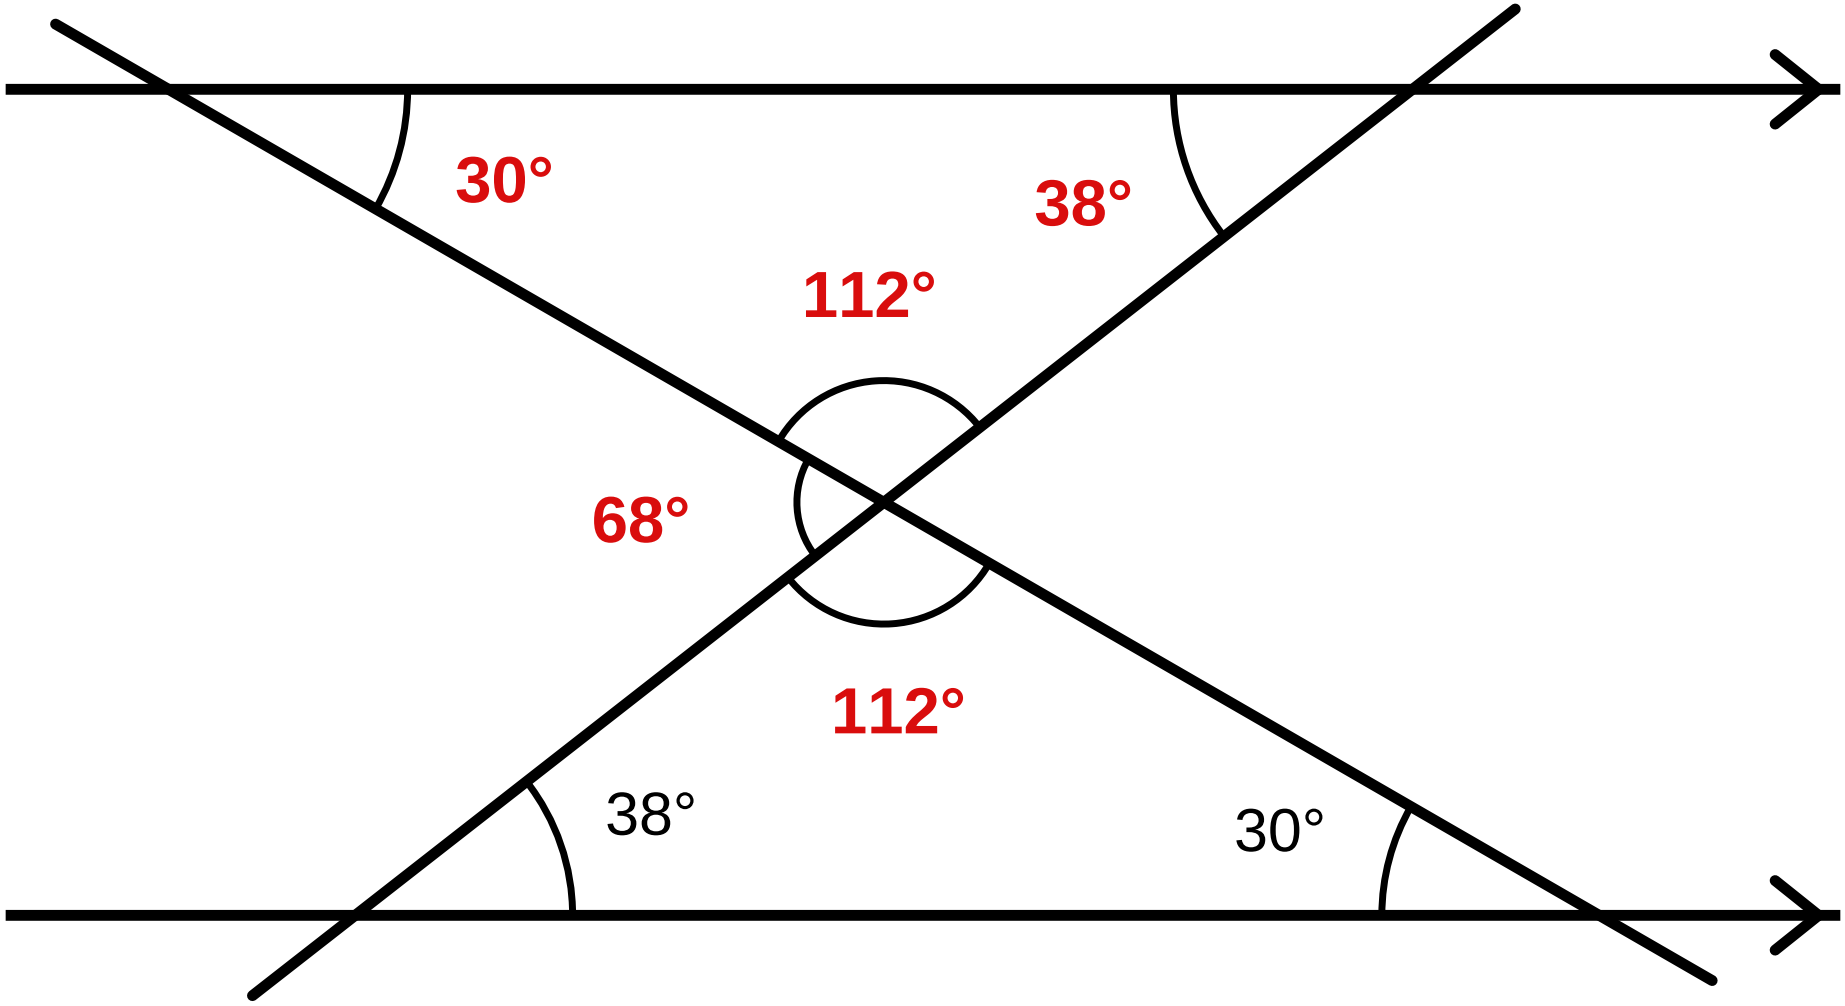
Alternate interior angles are equal

angle = 70°

angle we already know | angle we are finding | triangle = 180° | arrows: equal angles / straight line = 180°

STATION 4

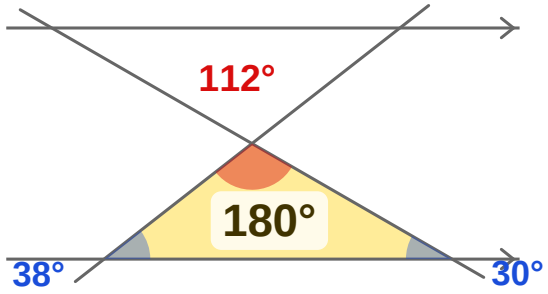
ANSWER KEY



STATION 4

HOW THE ANSWERS WERE FOUND

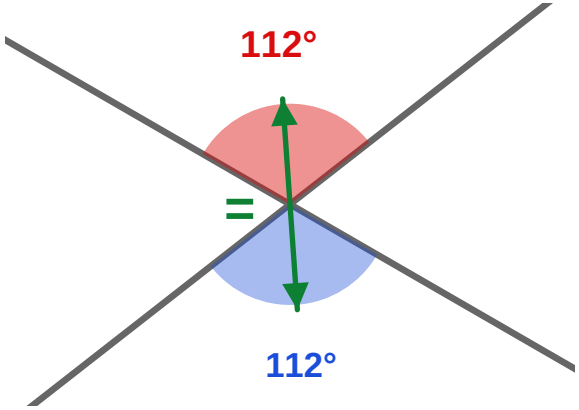
Step 1



The angles in a triangle add to 180°

angle = 180° - 38° - 30° = 112°

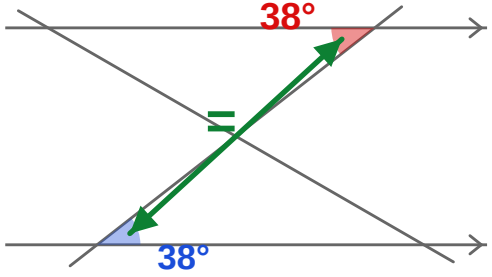
Step 2



Vertical angles are equal

angle = 112°

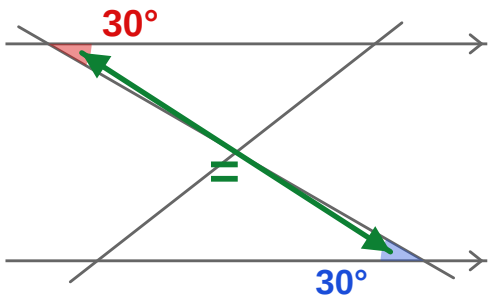
Step 3



Alternate interior angles are equal

angle = 38°

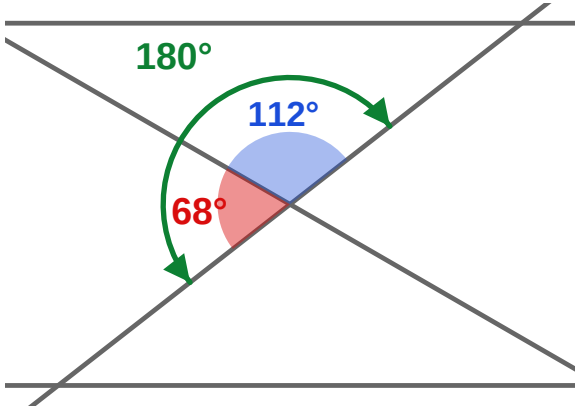
Step 4



Alternate interior angles are equal

angle = 30°

Step 5



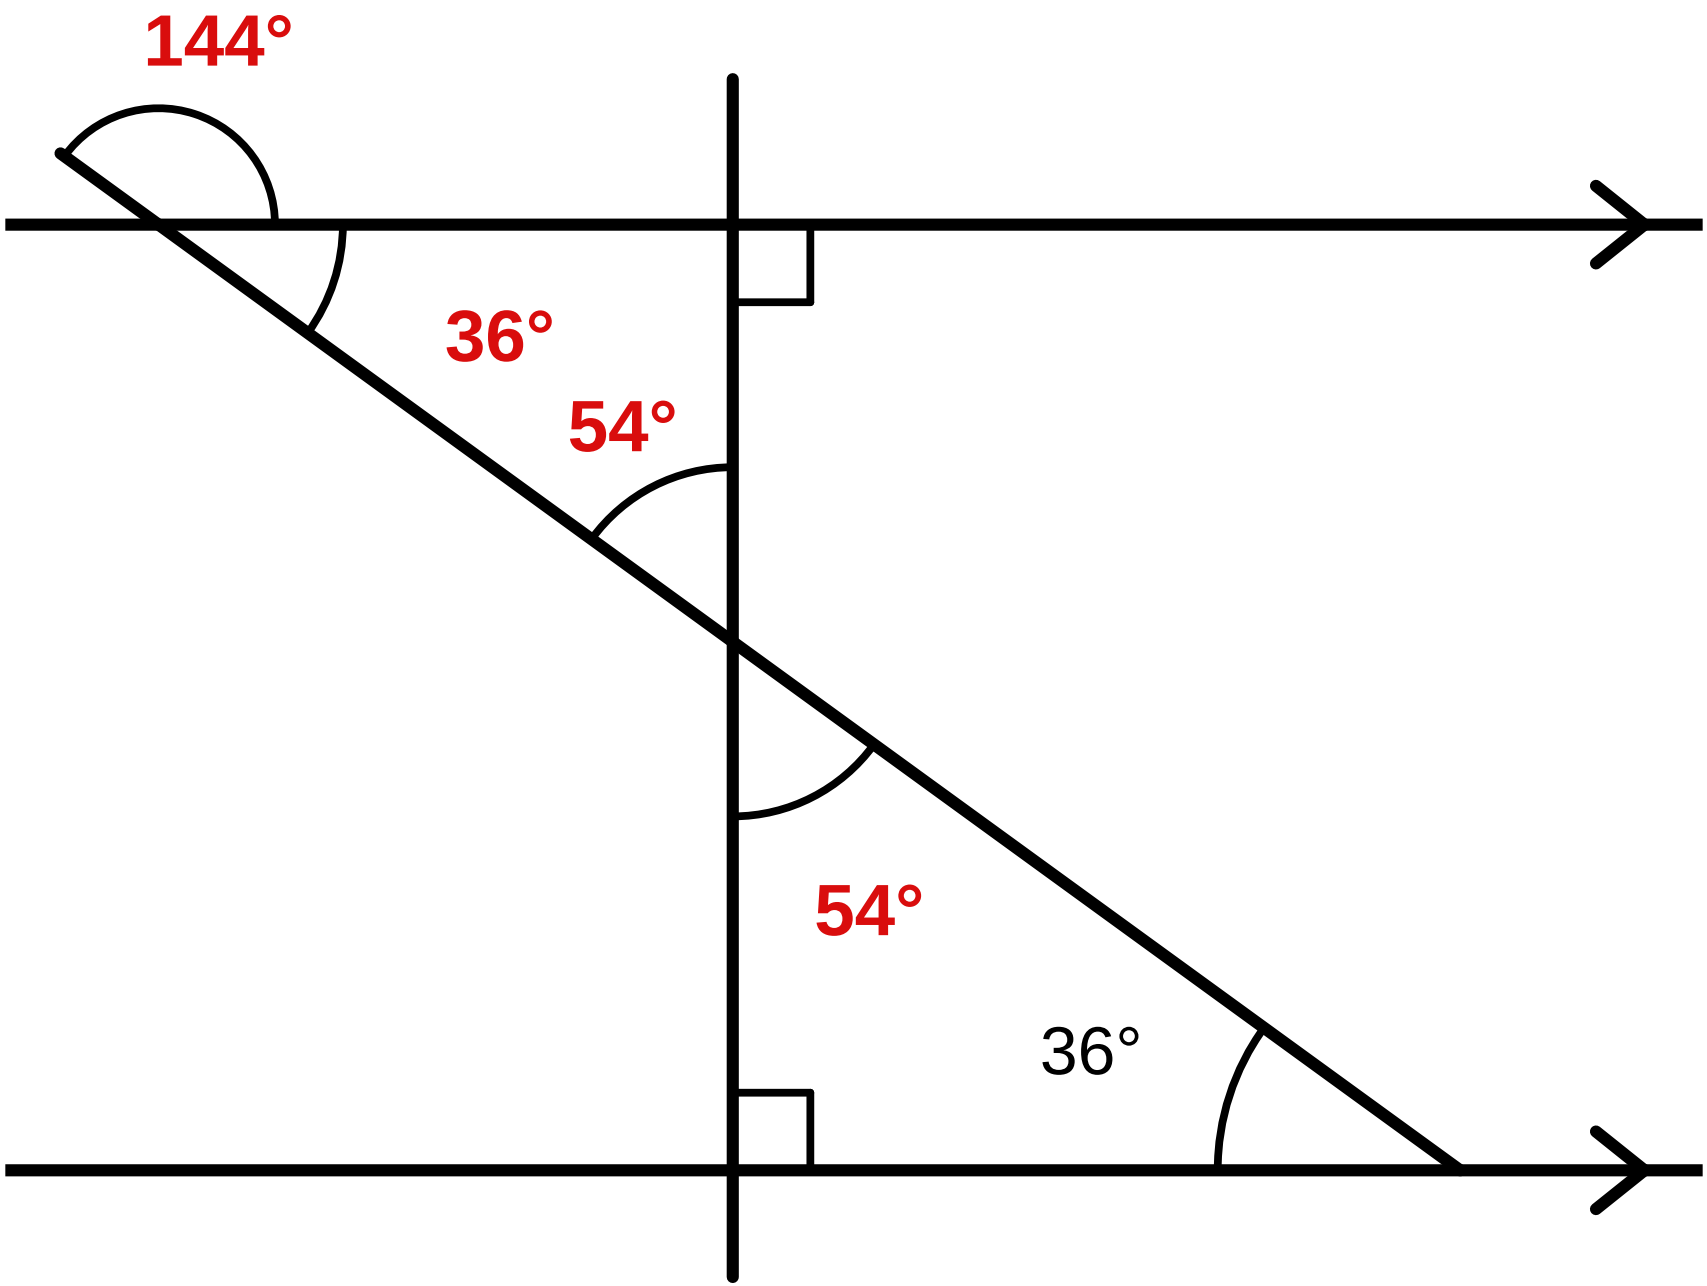
Supplementary angles add to 180°

angle = 180° - 112° = 68°

angle we already know | angle we are finding | triangle = 180° | arrows: equal angles / straight line = 180°

STATION 5

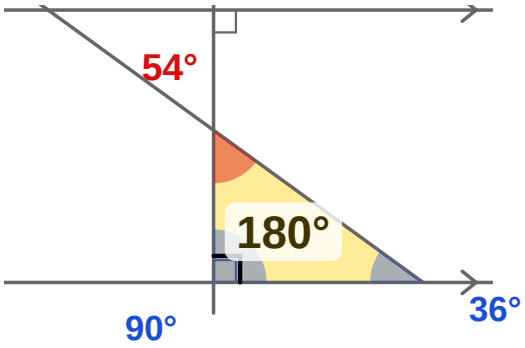
ANSWER KEY



STATION 5

HOW THE ANSWERS WERE FOUND

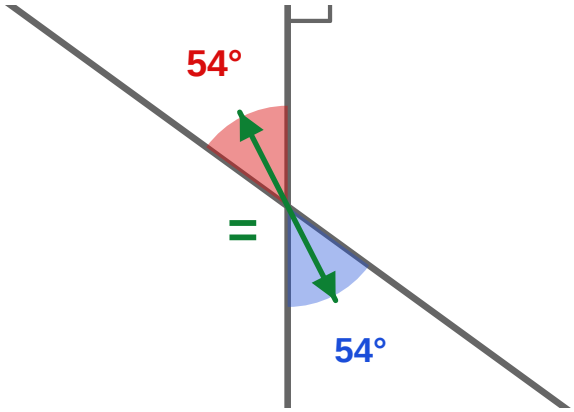
Step 1



The angles in a triangle add to 180°

angle = 180° - 90° - 36° = 54°

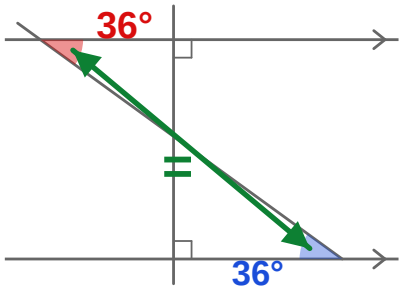
Step 2



Vertical angles are equal

angle = 54°

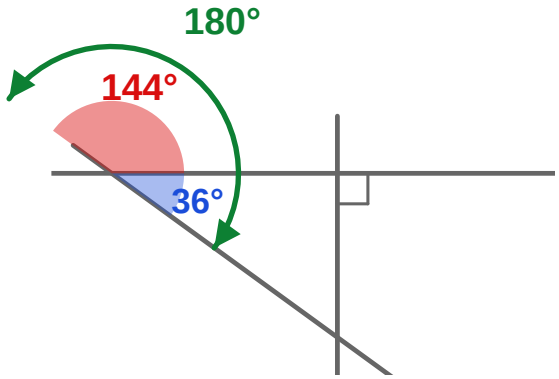
Step 3



Alternate interior angles are equal

angle = 36°

Step 4



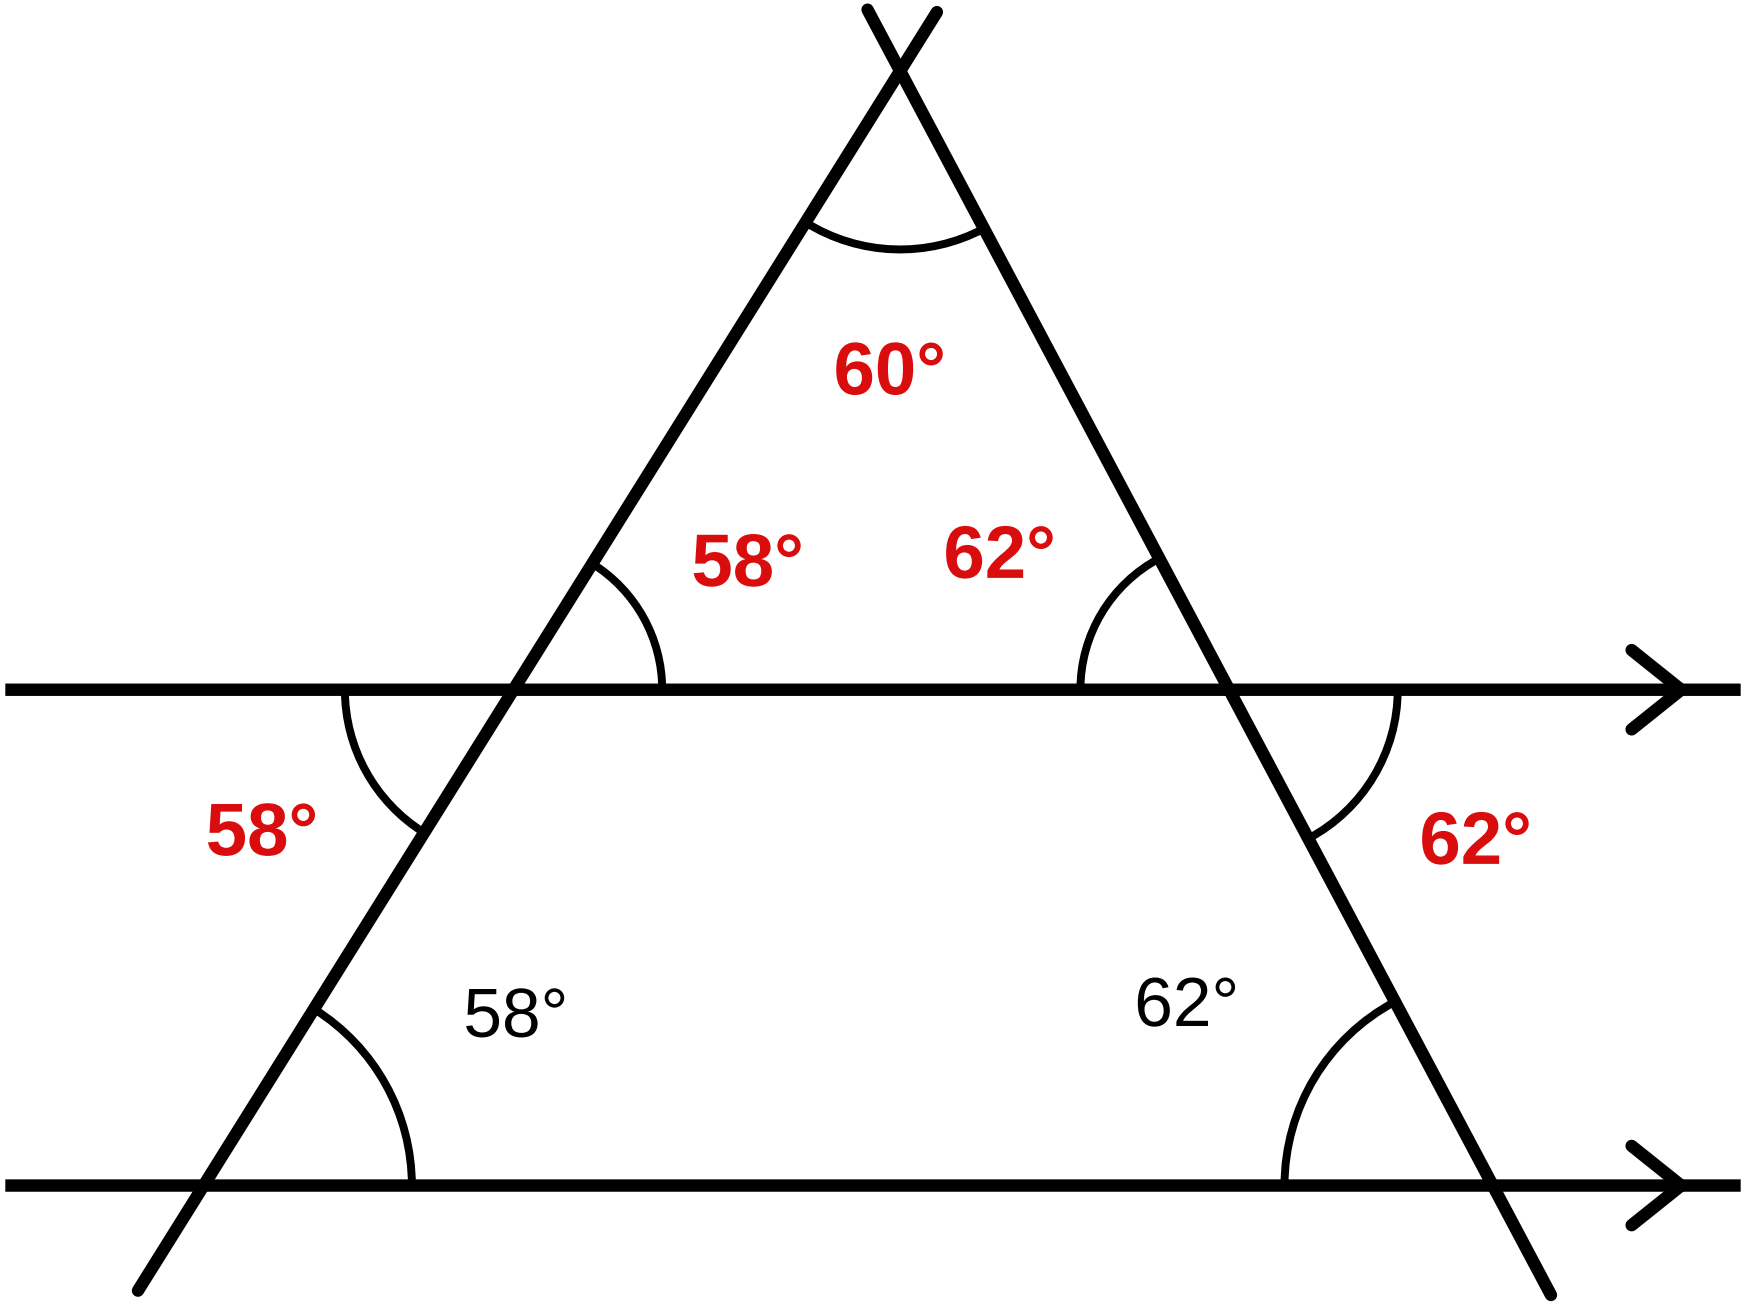
Supplementary angles add to 180°

angle = 180° - 36° = 144°

angle we already know | angle we are finding | triangle = 180° | arrows: equal angles / straight line = 180°

STATION 6

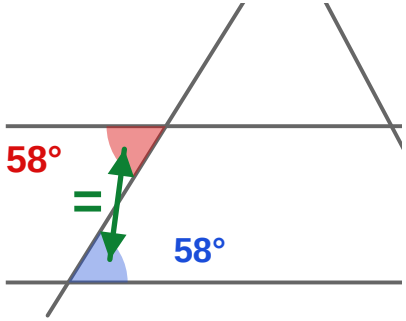
ANSWER KEY



STATION 6

HOW THE ANSWERS WERE FOUND

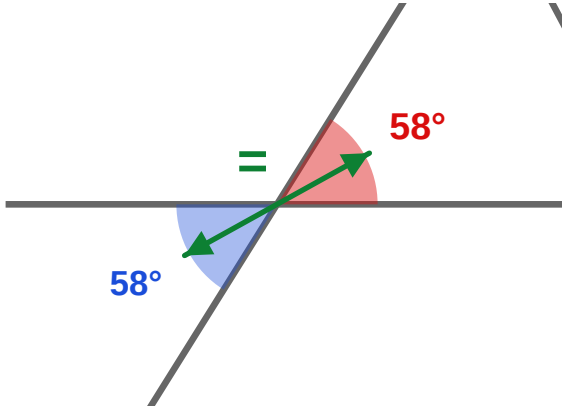
Step 1



Alternate interior angles are equal

angle = 58°

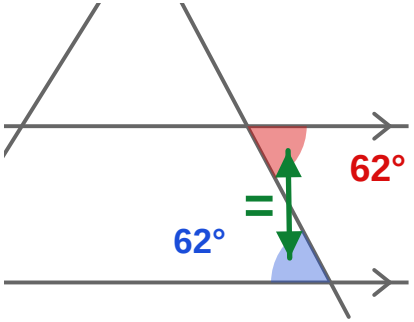
Step 2



Vertical angles are equal

angle = 58°

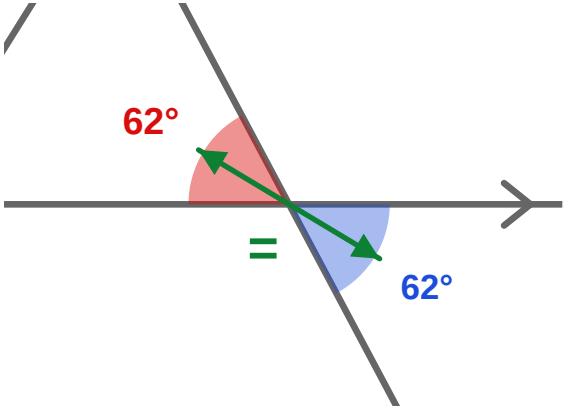
Step 3



Alternate interior angles are equal

angle = 62°

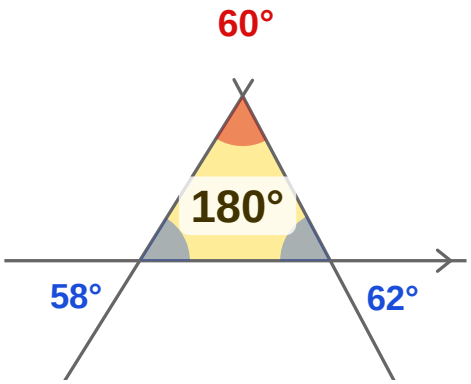
Step 4



Vertical angles are equal

angle = 62°

Step 5



The angles in a triangle add to 180°

angle = 180° - 58° - 62° = 60°

angle we already know | angle we are finding | triangle = 180° | arrows: equal angles / straight line = 180°
